In YTD Q3 2025, the corporate income tax expense was US\$4.8 million, compared to US\$6.7 million in the previous year. This figure was calculated using management's best estimate of the annual average income tax rate for the full financial year, determined on a jurisdiction-by-jurisdiction basis.

Seasonality

The worldwide presence of the Company reduces its overall exposure to seasonality and the influence this can have on the business activity. In Canada, seasonal slow periods occur during the winter freeze and spring thaw or break-up periods. Depending on the latitude, this can occur anytime from October until late December (freezing) and from mid-April through to mid-June (break-up). Operations at mining sites continue throughout the year. In Asia Pacific and in South America, where the Company operates exclusively in the Mining segment, a seasonal slowdown in activity occurs around year-end, during the vacation period. In Chile, certain contracts are also affected in July and August, when the winter season peaks.

Effect of Exchange Rates

The Company's operations span across a vast array of countries, each with their own functional currencies such as, Euros, Canadian Dollars, Australian Dollars, Chilean Pesos, and Brazilian Reals. The US Dollar has been adopted as the presentation currency for group reporting purposes. Over recent quarters, the US Dollar has experienced significant fluctuations in its value. This volatility has an impact on the Company's financial statements, due to the currency conversion required for financial reporting purposes.

The Company mitigates its net exposure to foreign currency fluctuations by balancing its costs, revenues and financing in local currencies, resulting in a natural hedge.

The exchange rates against the US Dollar for the periods under review are as follows:

	Average Q3 2025	Average Q3 2024	Average Q2 2025	Average Q2 2024	Average Q1 2025	Average Q1 2024	Closing Q3 2025	Closing Q4 2024
